Cheapest Flight Tracker

Abstract

This project aims to provide users with information on the cheapest flight fares available for their travel. The app will enable users to select a wide range of dates and indicate how flexible they are with their travel plans. Users can input multiple departure airports or choose to see all available flights within a 100-mile radius of their selected airport.

The application displays up-to-date information on the most affordable fares offered by all airlines and can notify users of any price drops. To enhance the user experience, the project will utilize predictive algorithms by feeding in the last year's fare prices to estimate trends and assist users in making informed travel decisions.

Overall, the project aims to provide a user-friendly and cost-effective solution for finding the best flight fares, while also providing insights and predictions to support informed decision-making.

Print Automator

Abstract

This proposal outlines the development of an automated printing app.
We all experience the difficulty to get our printings right in our college
printing center.we often wait longer to know the pdf doesnt even sent.
We aim to untackle this program by automating printing process.

Using our app user can pre emptivly assign the assign how they like to
have it printed. Eg. Single page, Double sided, two page per page etc.
and preview the result. Estimate and pay money beforehand using
UPI payment method. This can assure everyone payed price. We
incopertated and connect printer with Printer API. We designed a
Queue managemet system to manage and executed printing in order

 Overall, the user can print whatever type they want and pay it with
chick of the button

Student Assistant and Tracker

Abstract

The proposal suggests building an application that serves as a guide for college admission and assists students with various college processes. And simplify and centralize the process.

Scholarships assist details and requirement last date.
The app will feature a system to centralize and track hostel mess cuts for Hostelers
A custom attendance maintainer with beautiful interface that will make you to better breakdown and manage the attendance with integration of Logistics

    Features :

- Apply medical Report straight to the app
- It also generates periodic reports to keep a check on the students who are regular & who are not.
- Warning if attendance is bellow 75%
- Estimate total Class and provide max no of class student can take leave
